Problem Statement: There is a lack of easy and accurate disease diagnosis and treatment recommendations for individuals seeking quality healthcare, especially in remote or underserved areas. This leads to delayed treatment and potentially poor health outcomes.

Developed a Android App where users can able to predict their there Diseases based on symptoms they have provided. The ML model predicts the disease the based on the symptoms. After prediction the disease the app shows the list of Hospital which are providing the treatment for the disease which is predicted by our app..
